

## SHORT TERM EDUCATIONAL EXPERIENCES FOR RESEARCH IN ENVIRONMENTAL HEALTH SCIENCES FOR UNDERGRADUATE STUDENTS

APPLICATION DEADLINE  
MONDAY, APRIL 30, 2009

# INTERESTED IN HOW THE ENVIRONMENT AFFECTS HUMAN HEALTH?

Spend eight weeks this summer working with a University of California researcher in a paid summer internship program. Gain valuable experience and join other students who are interested in careers in science working on research projects that could be important for future academic and career opportunities.

Topics for research projects could include, as examples, one of the following:

- The relationship between socioeconomic status, air pollution and asthma
- Early life exposure to particulate matter and development of respiratory symptoms
- Exposure to ambient air pollution and bioaerosols and long-term asthma illness
- Respiratory effects of exposure to polycyclic hydrocarbons from traffic
- How environmental exposure to pollutants contribute to declining health
- Chronic respiratory effects of early life exposure to particulate matter
- Biomarkers of chemical exposure and leukemia risk
